

National Palliative Care Standards

Promote a consistent national approach to palliative care across all settings

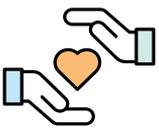

For specialist care providers, articulate a vision of holistic, individualised, sensitive, and evidence-based best practice.

For **all health professionals and aged care services**, strive to ensure that every Australian with a life-limiting condition has access to a high-quality palliative care approach.

Both sets of standards define what excellence in care looks like and provide aspirational benchmarks to support continuous improvement.

Define evidence-based benchmarks with aspirational goals for high-quality care.

Affirm a whole-of-sector responsibility—palliative care is everybody's business.

Guide individualised, holistic, culturally safe care across settings.

Drive continuous improvement through reflection, learning, and collaboration.
